

Review on 3D printing Workshop which is held on 7th of March 2026 at Osmania University.

We had great learning experience - We got to see advanced 3D printing technology.

They probably showed industrial 3D printers, which are different from basic ones.

The professionals there must have explained how 3D printing is used in industries like aerospace, healthcare, and automotive.

And I DR. K RAJESH from MECHANICAL DEPARTMENT have helped the students to gain more knowledge while supporting them to do their best and encourage them to come up with the best innovations.
